Exercises – Basic Notation of Activity Diagrams

If you have followed along, you should have a use case diagram called *Running* like this with a use case *Directly control device via browser*.

Now you are going to create an activity diagram for this use case.

Add a new activity diagram as a child diagram to the use case.

Add an activity called *Directly control device via browser*.

Add initial and final nodes with no names.

Add the following activities:

Display list of rooms

Select room

Display list of devices in room

Select device

Control device

Connect the activities and the initial and final nodes using control flows.

Your diagram should look something like this.
